

Proposed Solution

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

1. Solution Overview

- PocketSmart AI is a cross-platform GenAI-powered recommendation assistant designed for budget-based planning.
- Users enter their requirements through simple planner forms and receive structured AI-generated recommendations.

2. Main Solution Modules

Home Planner

- Accepts budget, room type, and quantity-related inputs.
- Generates home decor or furnishing recommendations.

Party Planner

- Accepts budget, guest count, event type, and venue.
- Provides budget allocation and recommendations for catering, decoration, and entertainment.

Jewelry Planner

- Accepts budget, occasion, and style.
- Can support an outfit image as an optional input.
- Generates suitable jewelry recommendations.

Recommendation History

- Stores generated recommendation sessions.
- Allows users to open recommendation details again.

3. User Flow

- Register or log in to the application.
- Select a planner.
- Enter budget and relevant requirements.
- Submit the planner form.
- AI generates recommendations.
- User views recommendation details and can revisit history.

4. AI Component

- The project uses Gemini 1.5 Flash Pro for generating recommendation content.
- The generated output is presented through the application's recommendation pages.

5. Intended Benefits

- Faster budget-oriented planning.
- Personalized suggestions based on user inputs.
- A single application for home, party, and jewelry planning.
