

Project Executable Files

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

Application Execution

- The PocketSmart AI application is executed as a FastAPI web service using Uvicorn.
- The deployed application is accessible through its live web service URL.

Main Runtime Components

- FastAPI backend application.
- Uvicorn application server.
- Responsive frontend pages.
- Gemini-powered recommendation generation.
- Recommendation history and details functionality.

Execution Flow

- Start the FastAPI application with Uvicorn.
- Open the web application.
- Register or log in.
- Select Home, Party, or Jewelry Planner.
- Submit requirements and view generated recommendations.
- Use history to revisit saved recommendations.
