

Solution Requirements

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

1. Functional Requirements

Module	Requirements
User Authentication	User registration, login and authentication.
Home Planner	Accept budget, room type and required quantities and generate AI-based recommendations.
Party Planner	Accept budget, guest count, event type and venue and generate party recommendations.
Jewelry Planner	Accept budget, occasion and style, with optional outfit image input, and generate jewelry recommendations.
Recommendation History	Allow users to access previously generated recommendations.
Recommendation Details	Allow users to view detailed information for a selected recommendation.

2. Non-Functional Requirements

- Responsive user interface
- Secure authentication
- Fast API response
- Easy-to-use application
- Reliable recommendation generation

3. AI Requirements

The solution uses Gemini AI to generate recommendations based on the user's entered budget and planning requirements. The recommendation prompts are designed for Home, Party and Jewelry planning scenarios.

4. User Requirements

Users should be able to enter their budget and requirements, generate recommendations, view recommendation details, and access previous recommendations through Recommendation History.

5. Solution Goal

The solution should provide a simple AI-powered application that helps users obtain budget-conscious recommendations for home planning, party planning and jewelry selection.
