

Coding & Solution

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

Implementation

- PocketSmart AI is implemented as a web application with a FastAPI backend and responsive frontend.
- Gemini 1.5 Flash Pro is used for AI-generated recommendations.

Planner Solutions

- Home Planner generates budget-based home recommendations.
- Party Planner handles budget, guest count, event type, venue, and allocation across catering, decoration, and entertainment.
- Jewelry Planner uses budget, occasion, style, and optional outfit image inputs.

Backend

- FastAPI routes process planner requests, authentication/session flows, recommendation details, and history.
- Uvicorn is used to run the application.

Output

- Generated recommendations are displayed in structured recommendation pages and can be revisited through history.
