

Problem-Solution Fit

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

1. Problem Identified

- Users often struggle to plan purchases or events within a fixed budget.
- Comparing suitable options across multiple categories and services can take time.
- Users need recommendations that consider their budget, requirements, and preferences.

2. Target Users

- People planning home decoration or furnishing within a budget.
- People planning parties and events with a limited budget and guest count.
- People looking for jewelry suggestions based on occasion, style, and budget.

3. Proposed Solution

- PocketSmart AI provides AI-powered budget-based recommendations through dedicated Home, Party, and Jewelry planners.
- The system uses user inputs such as budget, requirements, occasion, guest count, and style to generate recommendations.
- Recommendation history allows users to revisit earlier generated plans.

4. Problem–Solution Fit

- Budget constraint → budget-aware recommendation generation.
- Complex planning → dedicated planner workflows for different use cases.
- Too many choices → AI-generated, structured suggestions.
- Need to revisit plans → recommendation history and details pages.

5. Expected Value

- Reduces manual planning effort.
- Organizes recommendations in an easy-to-read format.
- Supports multiple planning scenarios through one application.
