

Sample Project Documentation

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

Project Name

- PocketSmart AI – Your Smart Budget & Recommendation Assistant

Purpose

- Provide AI-powered, budget-based recommendations for home decor, party planning, and jewelry.

Technology

- Python and FastAPI backend.
- Gemini 1.5 Flash Pro for recommendation generation.
- Responsive web frontend.
- Uvicorn for application serving.

Modules

- Home Planner.
- Party Planner.
- Jewelry Planner.
- Authentication and sessions.
- Recommendation details.
- Recommendation history.

Testing

- Test all three planners, authentication, recommendation display, history, and deployed application flow.

Deployment

- The completed application is deployed as a web service and can be demonstrated through the live application.
