

Customer Journey Map

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

Customer Journey Overview

This journey describes how a user interacts with PocketSmart AI from entering the application to receiving and reviewing an AI-generated recommendation.

Stage	User Action	System Response	User Outcome
1. Discover	Opens PocketSmart AI and understands the application interface and planning options.	Displays the application interface and planning options.	Understands that the application provides budget-based recommendations.
2. Register / Login	Registers or logs in.	Authenticates the user and provides access to the application features.	Saves the application.
3. Select Planner	Chooses Home, Party or Jewelry Planner.	Displays the selected planner form.	Can enter category-specific requirements.
4. Enter Requirements	Provides budget and relevant planning information.	Validates and processes the submitted information.	Requirements are ready for recommendation generation.
5. Generate Recommendation	Submits the planning request.	AI processes the inputs and generates recommendations.	Receives data on recommendations based on the entered requirements.
6. Review Output	Views the generated recommendation.	Displays recommendation results and details.	Can review the suggested options.
7. History / Details	Opens Recommendation History or Recommendation Details.	Retrieves previously generated recommendations.	Can revisit previous recommendations.

Key Touchpoints

- Registration and Login
- Home Planner
- Party Planner
- Jewelry Planner
- AI Recommendation Output
- Recommendation History
- Recommendation Details

Expected Experience

The user should be able to move from entering requirements to viewing recommendations through a simple and responsive application flow.
