

Define Problem Statements

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

1. Problem Overview

Users often need recommendations for home planning, party planning and jewelry selection while working within a specific budget. The project addresses the need for a single application that can generate AI-based suggestions according to the user's budget and requirements.

2. Problem Statements

No.	Problem Statement
1	Users need suitable recommendations that consider their available budget.
2	Users may need different types of recommendations for home, party and jewelry planning.
3	Users need to provide their planning requirements in a simple and structured way.
4	Users need an easy way to view previously generated recommendations.
5	Jewelry planning can also require consideration of an outfit image along with budget, occasion and style.

3. Proposed Problem Focus

PocketSmart AI focuses on providing budget-based recommendations through three planning modules: Home Planner, Party Planner and Jewelry Planner. The system accepts user requirements and uses Gemini AI to generate recommendations.

4. Expected User Need

The application should allow users to enter their requirements, generate recommendations, view recommendation details and access recommendation history through a simple interface.
