

# Performance Testing

Project: PocketSmart AI – Your Smart Budget & Recommendation Assistant

## Testing Objective

- Verify that PocketSmart AI responds correctly to planner requests and displays generated recommendations.

## Home Planner

- Submit valid budget, room type, and quantity inputs.
- Verify that a recommendation result is returned and displayed.

## Party Planner

- Submit budget, guest count, event type, and venue.
- Verify budget allocation and recommendation output.

## Jewelry Planner

- Submit budget, occasion, and style.
- Verify recommendation output and optional image-input flow.

## History and Details

- Verify generated sessions appear in recommendation history.
- Open stored recommendation details and confirm the result is accessible.

## Deployment Validation

- Verify the deployed application loads successfully and planner workflows operate end-to-end.
